SRCNN / Complete experiment evolution

207 experiments / 217 main links / 100 MHz reference / snapshot 653ceb9

Thick solid arrows: main optimization relationships. Multiple parents only where needed; all archive relationships remain in the ledger.

Green: current stage passes with network latency; amber: HLS timing warning; red: specific problem shown; gray: auxiliary; teal: analysis.

Bold: comparable network ms/frame at 100 MHz; red times are not bold. ~ plus ID: estimate cited from the same design.

Existing HLS/RTL cycles only; no 10 ns synthesis rerun or board measurement; host/DMA excluded. Green does not establish routed timing.

Faded: failed/unrun/no passing functionality. Auxiliary labels state C/PE/layer scope; hover for provenance and verification status.
